SECTION 1 *Embark on Your Business Journey*

1.0 Getting started

1.1 Technology Requirements

The software is designed to provide comprehensive business management solutions, including CRM, sales, accounting, and inventory management. To ensure optimal performance and usability, the following computer specifications must be met.

Minimum System Requirements

Processor

- Intel Core i5 (or equivalent) with a clock speed of 3.0 GHz or higher.
- High-performance processors offer better responsiveness and faster data processing.

Memory (RAM)

- Minimum 8 GB of RAM.
- Higher RAM capacity (e.g., 16 GB or more) is recommended for smoother operation, especially when handling large datasets or running multiple modules simultaneously.

Operating System

- Windows 10 (64-bit) or MacOS 10.14 or later.
- Ensure the operating system is up-to-date with the latest patches and updates.

Storage

- Minimum 500 GB solid-state drive (SSD) for the installation of the software.
- Additional storage space for database files, documents, and backups.
- The use of fast SSDs is recommended for improved read/write speeds and overall system performance.

Graphics Card

- Integrated graphics or dedicated entry-level graphics card.
- Graphics performance is less critical for business management software unless it involves extensive visual rendering or complex graphical analysis.

Display

- Minimum screen resolution of 1366x768 pixels.
- Larger screens or multiple monitors are recommended for enhanced productivity and multitasking.

Recommended System Requirements:**Processor**

- Intel Core i5 or AMD Ryzen 5 processor (or equivalent) with a minimum clock speed of 2.5 GHz.
- Multi-core processors are recommended for better performance during resource-intensive tasks.

Memory (RAM)

- 4 GB or higher RAM capacity for improved multitasking, handling large datasets, and running resource-intensive modules.

Storage

- 512 GB or larger SSD/HDD for faster read/write speeds and ample storage space for data and backups.

Display

- High-resolution display with accurate color representation, such as an IPS or PLS panel.
- Recommended screen size of 24 inches or larger for enhanced productivity and clear visibility of text and data.

Operating System

- Latest version of Windows 10 (64-bit) for compatibility with the latest software features and updates.

SECTION 2 *Unlocking Business Manager's Potential*

2.0 What is business Manger?

Business Manager is an offline-ready software with LAN support, focusing on inventory management, sales, and analytics. It ensures smooth operations in areas with limited internet connectivity and emphasizes data security and privacy for local businesses.

2.1 Is Business Manager right for my business?

Every business has different needs. The industry most suited for accounting software and products such as Business Manager is the **Retail and eCommerce Industry. Businesses** that sell or resell products, such as supermarkets, Pharmacies or Hardware shops and more.

2.3 Packages Available

There are three versions of Business Manager. A plan can be chosen to suit the requirements of the business.

Each offering provides features relevant to the selected plan. Further details on the features available under each product version can be found at www.komusoft.com

Each offering provides features relevant to the selected plan, which you can review on the Compare Plans page.

2.4 Benefits of using Business Manager

Point Of Sales (POS)

- Increase your customer experience with this dedicated Point of Sale interface which supports all peripheral hardware such as printers, scanners.
- Minimizes transaction errors whilst transacting. That is showing balance, price of item and quantity.

Inventory Management

- Support for Goods Receipts, Stock Adjustments, Expiries, Stock taking and Goods return.

Integrated Accounting

- We offer a center for all your accounting related needs. Such as income statement, balance sheets.

Comprehensive Reporting

- With over 100 hindered reports to choose from, all aspects are covered and integrated.

Customer & Vendor Mgt

- Record general information and contact information
- Gift vouchers
- Quotations, purchase orders, invoices, receipts

SECTION 3 *Real-world Success Stories*

3.0 A case study

Streamlining Financial Management for Business **The business**

Mary, an owner of a business, implemented Business Manager to enhance their financial management practices. By addressing various aspects such as payroll, inventory tracking, and job allocations, Mary successfully streamlined operations and improved overall efficiency in her business.

As a business owner, she recognized the importance of effective financial management to ensure the success and growth of her Business. Seeking a solution, Mary decided to implement Business Manager to meet her financial management requirements.

Financial Management Requirements

1. **Payroll:** With employees on her payroll, she needed a system that could efficiently handle payroll processing. Business Manager provided advanced payroll features, allowing for accurate wage calculations and streamlined payments.
2. **Bank Accounts and Credit Card Integration:** she utilized multiple business bank accounts and a credit card for financial transactions. Business Manager allowed for easy integration with bank accounts and credit cards, enabling her to track and manage her business's financial transactions effectively.
3. **Job Allocations and Inventory Tracking:** she needed to effectively allocate resources. Business Manager provided tools to allocate resources efficiently, track job progress, and oversee inventory levels, thus optimizing operations and contributing to increased profitability.

By implementing **Business Manager**, Mary successfully enhanced the financial management practices of his business. The system's comprehensive features allowed for streamlined payroll processing, efficient superannuation management, seamless data migration, integrated bank account and credit card management, customizable invoices, and effective job allocations and inventory tracking. These improvements contributed to increased operational efficiency and better financial decision-making

SECTION 4 *Navigating through business manager*

4.0 The back office

4.1 Login

To log into the back office, a user has to enter their username and password as provided by the system admin. Additionally, it's worth noting that every license buyer is given an account with the package, ensuring access to the necessary credentials for logging in.

4.3 Creditors

Here, we manage and track payments to suppliers or creditors. This page opens up to a List of all suppliers or creditors previously entered.

Creditors are individuals or institutions e.g., suppliers that extend credit to others. They are the ones who expect to be repaid the money for items supplied or services offered. In simple terms, creditors are like people or companies who give you money or supplies but expect you to pay.

4.4 Goods Receipt

This sub-section is dedicated to recording the arrival of new inventory items and updating stock levels. It provides detailed instructions on how to verify and receive goods against purchase orders or receipts from vendors, ensuring accurate tracking and management of inventory levels. This process is crucial for maintaining consistency between physical stock and recorded inventory, optimizing stock control and supply chain operations.

A goods receipt is a document which shows items a business receives from its suppliers. If a supplier provides you with goods, they write you a receipt of all items given, the amount and payment terms. This section provides automatic updates of stock levels in the system.

How to record the arrival of new inventory items.

Enter a receipt number from the supplier, receipt date, reference number, choose a supplier name from the drop down, the store to receive the items and also the shop where the items will be sold.

You can also tap the received-on consignment

What's that! Received on consignment" refers to a business arrangement in which goods are sent by a supplier or owner to a consignee (a person or business) to sell on their behalf.

Or Goods fully paid

"Goods fully paid" refers to a situation where all financial obligations or debts associated with the purchase of goods have been completely settled.

4.5 Stock Adjustment

Stock adjustment refers to the process of modifying the quantity of stock on hand to reflect the actual physical inventory. This adjustment can occur for various reasons, such as discrepancies in stock levels, damaged or expired goods, or errors in recording stock transactions.

Stock adjustments are necessary to ensure that the recorded inventory levels accurately represent the actual quantity of goods available for sale or use. In a retail or manufacturing setting, stock adjustments enable businesses to maintain accurate records of their inventory and prevent miscalculations that could lead to stockouts or overstock situations.

The stock adjustment process typically involves updating the inventory management system or software to reflect the correct quantity of stock on

hand. This adjustment can be made through physical stock counts, reconciling discrepancies, and making necessary changes to the inventory records.

Let's get you started on adjusting stock levels for damaged or expired items.

- To carry out stock taking, click the **"new"** button which will prompt you to a dialogue box asking you to confirm.
- If yes, a new dialogue box is prompted. Here you fill in the date of carrying out stock taking and the department.
- In the line items table, you enter the item code of the product you want to stock take. Then follow the prompts in the rows as follows.

(New) Stock Taking

SECTION 5 *Mastering the Sales Module*

5.0 The Supermarket

The **Supermarket module** handles daily business operations by recording sales, managing damages and expiries, applying stock adjustments, conducting stock takes, transferring stock, tracking outgoing stock, monitoring cashier shifts and returns, processing goods returned to suppliers, generating daily cash summaries, tracking items, and managing outstanding receipts and payments.

Key Functions

- **Sales** – Handles customer purchases at the point of sale, recording items sold and updating stock levels automatically.
- **Damages/Expiries** – Records items that are damaged or expired, ensuring they are removed from available stock and accounted for in reports.
- **Other Adjustments** – Allows manual corrections to stock records when discrepancies occur outside normal processes.
- **Shop Stock Take** – Supports physical inventory counts to verify system records against actual stock.
- **Stock Transfer** – Manages the movement of goods between branches or departments, keeping track of internal logistics.
- **Supermarket Outgoing Stock** – Tracks stock leaving the supermarket, such as deliveries or transfers to other outlets.

- **Cashier Shifts** – Monitors cashier activities, including shift start and end times, to maintain accountability.
- **Cashier Returns** – Records items returned by customers through the cashier desk, updating stock and financial records.
- **Goods Returned** – Manages goods sent back to suppliers for credit, replacement, or refunds.
- **Daily Cash Summaries** – Generates end-of-day cash reports for reconciliation with sales and expenses.
- **Item Tracker** – Provides detailed tracking of specific items across sales, returns, and stock movements.
- **Outstanding Receipts** – Displays pending receipts that have not yet been cleared, helping with financial follow-up.
- **Outstanding Payments** – Tracks unpaid invoices or pending payments to suppliers and creditors.

5.1 Sales

This section focuses on all sales transactions made using Business Manager system. It provides the date, receipt number, customer, promo, pricing, amount, the cashier and EFRIS status.

Date	Receipt No.	Ref #	Customer	Promo	Pricing	Amount	Cashier	EFRIS Status	EFRIS Remark

5.3 Other Adjustments

This section covers handling other stock adjustments specific to the supermarket section. Please refer to stock adjustment in the back-office menu

The screenshot shows a software window titled "Data Entry Manager" with a close button (X) in the top right corner. The main content area is titled "(New) Stock Adjustment". It contains the following fields and controls:

- Adjustment Date:** A dropdown menu showing "29/04/2026".
- Inventory Item Code:** A text input field followed by a "Choose ..." button.
- Quantity Adjusted:** A numeric input field showing "0" with up and down arrow buttons.
- Adjustment Type:** A dropdown menu showing "Expiry".
- Remarks:** A large, empty text area with a vertical scrollbar on the right.

At the bottom left of the window is a green pushpin icon. At the bottom right is a "Save" button with a floppy disk icon.

5.4. Shop Stock Take

This sub-section helps when carrying out stock taking in the shop. It allows you to record physical counts of items and compare them with system records, ensuring accurate inventory management.

To perform a shop stock take, go to *Back Office* → *Shop Stock Take*, count the physical items in the shop and enter the quantities into the system, compare them with the system records to identify any variances, adjust the stock levels to match the actual quantities, and save the changes to update inventory records.

SECTION 7 *Dive into Financial Excellence*

7.0 Finances

The Finance module provides a central hub for managing all financial transactions within the business. It allows you to record, track, and analyze payments, invoices, purchases, sales, and other monetary activities, ensuring accuracy and transparency in financial reporting. By integrating with suppliers, customers, and banking records, this section helps maintain proper cash flow, monitor outstanding balances, and support informed decision-making.

With tools such as Invoices, A/P (Accounts Payable), A/R (Accounts Receivable), Credit Notes, Debit Notes, Journal Entries, and Bank Transactions, the Finance module ensures that every financial activity is captured and reconciled. This enables businesses to stay compliant, reduce errors, and maintain strong relationships with both suppliers and customers.

The screenshot shows the 'Invoices' module in the KOMUSOFT application. The interface includes a top navigation bar with tabs for Back Office, Supermarket, Human Resource, Finance, Configuration, and Reports. Below the navigation bar is a toolbar with icons for New, Edit, Delete, Tasks, Refresh, Print, Listing, and Printing. The main area displays a table of invoices with the following columns: Date, Beneficiary, Category, Ref #, Amount, Vat, Discount, Amendments, TotalPaid, Balance, and Entrant. The table contains 6 records. On the right side, there is a sidebar with a list of financial transactions, including Invoices, A/P - Goods Bought, A/P - Services & Utilities, A/P - Miscellaneous, Credit Note To Vendor, Salary Payments, Allowances & Bonuses, A/R - Goods Sold, Debit Note To Vendor, Journal Entries, Financial Utilities, Cheque Clearing, Customer Transactions, Bank Transactions, Loans/Advances, and Deposit.

7.1 Invoices

This section provides instructions for tracking and managing invoice status and payments.

An invoice is a document issued by a seller to a buyer, detailing the items or services provided, their quantities, prices, and other transaction-related information. It acts as a record of a commercial transaction and serves as a request for payment from the buyer. In essence, an invoice is akin to a bill or receipt, outlining the amount owed for a purchase.

Typically, an invoice includes the seller's and buyer's contact details, a description of the goods or services, unit prices, quantities, any applicable taxes or discounts, the total amount due, and payment terms. Its purpose is to facilitate transparent and efficient transactions by providing a clear breakdown of the transaction for both parties involved.

The screenshot shows the 'Invoices' module in the KOMUSOFT SOLUTIONS LTD application. The interface includes a navigation bar with tabs for Back Office, Supermarket, Human Resource, Finance, Configuration, and Reports. Below the navigation bar are icons for New, Edit, Delete, Refresh, Print, and Listing. The main area displays a table of invoices with columns for Date, Beneficiary, Category, Ref #, Amount, Vat, Discount, TotalPaid, Balance, and Entrant. The table shows 13 records. On the right side, there is a sidebar with a list of transactions including A/P - Goods Bought, A/P - Services & Utilities, A/P - Miscellaneous, Credit Note To Vendor, Credit Note From Vendor, A/R - Goods Sold, Debit Note To Vendor, Debit Note From Vendor, Journal Entries, Financial Utilities, and Cheque Clearing.

Accounts Payable (A/P) refers to the amount of money a company owes to its suppliers or vendors for goods or services purchased on credit. When we talk about "goods bought," it means the products or items that a company has purchased from its suppliers. In simple language, A/P Goods Bought refers to the record or account that tracks the purchases made by a company on credit.

When a company buys goods on credit, it does not make an immediate payment to the supplier. Instead, the company receives an invoice or a bill for the goods, which states the amount owed and the payment terms. The company then adds this amount to its Accounts Payable account, representing the outstanding balance that needs to be paid to the supplier.

The A/P Goods Bought account is important for a company's financial management because it helps track the amount owed to suppliers and provides a clear picture of the company's financial liabilities. It is important for a company to manage its A/P effectively to ensure timely payments and maintain good relationships with suppliers.

To add a new **goods purchase payment**, click the new action button. A new window pops up with a dialog box requiring you to fill in the required information such as payment date, reference number, beneficiary, amount paid, payment method and who receives the payment.

7.3 A/P Services & Utilities

This section focuses on recording and managing accounts payable for services and utilities. It includes steps for entering and updating invoices for services and utilities expenses.

Accounts Payable (A/P) Services & Utilities refers to the amount of money a company owes to service providers and utility companies for services rendered. In simple language, A/P Services & Utilities represents the record of expenses that a company has accrued for services such as maintenance, repairs, professional fees, or monthly utility bills like electricity, water, telephone, internet, and other similar services.

When a company receives services or utilities, the provider usually issues an invoice or bill for the services rendered. The company adds these expenses to its Accounts Payable account, which reflects the outstanding amount that needs to be paid to the service providers or utility companies.

To add a new **service payment**, click the new action button. A new window pops up with a dialog box requiring you to fill in the required information such as payment date, expenses category, reference number, beneficiary, payment method, amount paid, remarks and who receives the payment

7.4 A/P Miscellaneous

Here, you will learn how to record and manage accounts payable for miscellaneous expenses. It includes steps for entering and updating invoices for other payable items.

Accounts Payable (A/P) Miscellaneous refers to the amount of money a company owes for various miscellaneous expenses that do not fall under specific categories. In simple language, A/P Miscellaneous represents the record of miscellaneous or diverse expenses that a company has incurred but doesn't fit into other predefined categories.

These expenses can include items such as small purchases, office supplies, repairs, maintenance, travel expenses, professional services, or any other miscellaneous costs that are not directly related to the company's primary products or services.

To add a new **miscellaneous payment**, click the new button. You will be directed to a new window with a dialog box where you will enter information such as payment date, expenses category, reference number, beneficiary, payment method, amount paid, remarks and who receives the payment.

7.5 Credit Note to Vendor

This section covers issuing credit notes to vendors for returned or overpaid items. It includes creating and updating credit notes.

A credit note to a vendor, is a document issued by a buyer to a seller or supplier to indicate that they have received a credit or a refund for a previously purchased product or service.

Imagine you bought something from a store, but later discovered that there was an issue with the item. Instead of returning the item and getting your money back, the store may issue you a credit note.

Similarly, in a business context, if a company receives goods or services from a vendor and later finds a problem with the delivery or decides to return some items, they may issue a credit note to the vendor. The credit note details the items returned, the quantity, and the value of the return. It serves as documentation for the vendor to process a credit or refund to the company for the returned items.

The credit note helps maintain accurate records of the financial transactions between the buyer and the seller. It assists in ensuring that the vendor reimburses the buyer appropriately and helps in reconciling any outstanding balances or disputes related to the original purchase.

To create a new **credit, note to vendors**, click the new button. You will be directed to a new window with a dialog box. Fill in the information such as payment date, reference number, beneficiary, payment, amount paid, remarks and who receives the payment and save.

7.6 Credit Note from Vendor

Here, you will find information on handling and processing credit notes received from vendors. It includes instructions for updating vendor balances and reconciling discrepancies.

A credit note from a vendor is a document that acknowledges the issuance of a credit or refund for a previously purchased product or service. Similar to receiving a refund from a store for a faulty item, a credit note from a vendor addresses issues encountered with a purchase made by a company. This document outlines the items being refunded or credited and their corresponding value, serving as evidence that the vendor acknowledges the problem and is providing compensation to the buyer.

In a business context, if a company encounters issues with purchased goods or services (such as receiving incorrect or faulty items), the vendor may issue a credit note. The purpose of the credit note is to ensure proper compensation for any incorrect, damaged, or unsatisfactory goods or services received. It helps maintain accurate transaction records, facilitates account reconciliation, and aids in resolving disputes related to the original purchase.

To add a new credit, note from the vendor section, users can click the "new" button, which will direct them to a new window with a dialog box. In this dialog box, users enter required information such as the payment date, reference number, beneficiary, payment amount, remarks, and recipient of the payment. This process enables efficient management and documentation of vendor credits within the business system.

7.7 A/R Goods Sold

Here, you will learn how to record and manage accounts receivable for goods sold. It includes steps for entering and updating invoices for goods sold to customers, as well as instructions for tracking customer payment due dates and managing customer balances.

Date	Reference	Method	Amount Paid	ReceivedBy	Account	Requisition	Voucher #	Referen...	Paymen...
30/04/2026	Goods Sold	Cash	500.00		Kakembo	Kasibante Mosses		PYM775...	Other
30/04/2026	Goods Sold	Cash	10,000,000.00		Cash Customer	Kasibante Mosses		PYM775...	Other

Accounts Receivable (A/R) Goods Sold, refers to the amount of money that a company is owed by its customers for products that have been sold on credit.

When a company sells goods to a customer on credit, it means that the customer does not make an immediate payment at the time of purchase. Instead, the company extends credit to the customer, allowing them to pay at a later date based on agreed-upon terms.

The A/R Goods Sold account is used to keep track of these outstanding amounts. It represents the money that is owed to the company by its customers for the goods they have purchased. The company records each sale in the A/R Goods Sold account, including information such as the customer name, invoice number, date of sale, and the total amount owed.

Managing A/R Goods Sold is important for a company's financial management because it helps track the amount of money that is receivable from customers. It is crucial to monitor and collect these outstanding receivables in a timely manner to ensure a healthy cash flow and the overall financial stability of the company.

To add new **A/R goods sold**, click the new button. You will be directed to a new window with a dialog box where you will enter information such as payment date, reference number, beneficiary, payment mode, amount paid, remarks and who receives the payment

7.8 Debit Note to Vendor

This section focuses on issuing debit notes to vendors for additional charges or fees. It includes steps for generating and recording debit notes, as well as instructions for adjusting accounts payable and updating vendor balances.

A debit note to a vendor, is a document issued by a buyer to a seller or supplier to indicate that an adjustment is needed in the amount owed to the vendor.

Imagine you bought something from a store, but later discovered that you were charged more than the agreed-upon price. To rectify this, you may issue a debit note to the store.

Similarly, in a business context, if a company notices an overcharge, damaged goods, or any other discrepancy in a vendor's invoice, they may issue a debit note to the vendor. The debit note details the items, quantities, and amounts that need to be adjusted. It serves as documentation for the vendor to make the necessary adjustments in the amount owed by the buyer.

The debit note helps maintain accurate records of financial transactions and ensures that the buyer is not overcharged or responsible for incorrect charges. It acts as a communication tool between the buyer and the vendor, allowing for the correction of errors and the appropriate adjustment of the outstanding balance.

To add a new **debit note to vendor**, click the new button. You will be directed to a new window with a dialog box where you will enter information such as

payment date, reference number, beneficiary, payment, amount paid, remarks and who receives the payment

7.9 Debit Note from Vendor

To issue a debit note to a vendor, press **New**, select **Debit Note to Vendor**, enter the payment date, reference number, inventory item, beneficiary, payment origin, amount paid, payment mode, and remarks, add cheque or transaction details if applicable, and then click **Save** to record or **Cancel** to discard.

This section covers handling and processing debit notes received from vendors.

A debit note from a vendor, is a document issued by a seller or supplier to a buyer to indicate that there has been an adjustment made to the amount owed by the buyer.

Imagine you bought something from a store, but later discovered that you were undercharged or had received a discount that was not properly applied. The store may issue a debit note to you to request payment for the remaining balance.

Similarly, in a business context, if a vendor realizes that they have undercharged a buyer or made an error in the original invoice, they may issue a debit note to the buyer. The debit note outlines the items, quantities, and amounts that need to be adjusted. It serves as a communication to the buyer that additional payment is required to correct the discrepancy.

The purpose of the debit note is to ensure that the correct amount is accounted for and collected from the buyer. It helps in maintaining accurate records of transactions, allows for proper reconciliation of accounts, and helps resolve any issues or discrepancies related to the original purchase. Essentially, it is a way for the vendor to acknowledge and rectify any errors or adjustments needed in the initial transaction.

To add a new **debit note from vendor**, click the new button. You will be directed to a new window with a dialog box where you will enter information such as payment date, reference number, beneficiary, payment, amount paid, remarks and who receives the payment

7.9.0 Journal Entries

Here, you will find information on creating and recording journal entries within the Business Manager system

Journal entries, in simple language, are financial recordings made in a company's accounting system to keep track of its transactions.

Think of journal entries as a way to record the flow of money into and out of a business. Every time a financial transaction occurs, such as a sale, expense, or purchase, a journal entry is created to reflect those activities.

For example, imagine a company makes a sale to a customer. The journal entry would record the revenue from the sale as well as any associated costs or expenses incurred in generating that revenue. This helps capture the financial impact of the transaction.

Each journal entry consists of at least two parts: a debit and a credit. Debits represent increases in assets or expenses, while credits represent increases in liabilities, revenue, or equity. The amounts on both sides of the entry must be equal to maintain the balance of the accounting equation ($\text{Assets} = \text{Liabilities} + \text{Equity}$).

These journal entries are typically recorded in the general journal and later transferred to the company's general ledger, where the financial information is classified and organized by accounts.

The purpose of journal entries is to provide a clear and organized record of a company's transactions, which is crucial for accurate financial reporting, analysis, and decision-making. They help capture the financial impact of business activities and ensure that the company's books are accurately updated.

To a new **journal entry**, click the new button. You will be directed to a new window with a dialog box. Select the GI/ACCOUNT, enter the credit, debit and select the vendor.

7.9.1 Financial Utilities

This section focuses on utilizing reporting utilities within the system. With this, you can generate a financial closure report for a given time.

Financial period closure, in simple language, refers to the process of finalizing and completing the accounting records for a specific period of time, such as a month, quarter, or year.

Think of it as the end-of-the-period activities that a company undertakes to ensure accurate and up-to-date financial information. During the financial period closure, various tasks are carried out to wrap up the accounting cycle and prepare for the next period.

Therefore, click review entries button, which open up a new page

7.9.1 Cheque Clearing

Here, you process and manage cheque clearing within the Business Manager system. It helps to monitor the status of the checks.

Check clearing, in simple terms, refers to the process of transferring funds from the check writer's account to the recipient's account.

When you write a check to make a payment, the check needs to be processed and the funds transferred from your bank account to the recipient's bank account. This is where check clearing comes into play.

Click the new button. You will be provided with a dialog box where you enter the transaction date, bank, transaction type and amount.

SECTION 9 *Insights at Your Fingertips*

9.0 Reports

The Reports section provides managers and business owners with insights into sales, stock, and financial activities. Reports are grouped into four categories — **Qualitative, Quantitative, Financial, and Administrative** — each designed to highlight different aspects of business performance.

These reports provide valuable insights into sales performance, inventory management, financial health, and operational efficiency. They aid in decision-making, strategic planning, and performance evaluation within the organization.

How to generate quantitative reports within the Business Manager system.

Click on the report you prefer to generate (some reports require user permission such as passwords to be accessed) select the dates of the reports you want to generate and save.

9.1 Quantitative Reports

In this section, you'll find a comprehensive overview of the quantitative reports available in Business Manager. These reports provide users with numerical data and metrics to analyze various aspects of their business performance. From sales figures to inventory levels and financial transactions, these reports offer valuable insights into the operational efficiency, profitability, and overall health of your business.

9.1.1 Sales Reports

Top Selling Products by quantity

This report lists the products that have sold the most in terms of quantity over a specific period. It helps identify which products are popular among customers.

Least Selling Products by quantity

This report highlights the products with the lowest sales volume. It can indicate slow-moving items that may require marketing or pricing adjustments.

Non-Selling Items

This report identifies products that haven't recorded any sales within a defined timeframe. It's essential for inventory management and may prompt decisions regarding stock clearance or discontinuation.

9.1.2 Stock Reports:

Goods Returns rate

This report calculates the percentage of goods returned by customers compared to the total goods sold. It helps assess product quality, customer satisfaction, and return policies.

Goods Expiry rate

This report tracks the rate at which products expire before being sold. It's crucial for managing perishable goods and minimizing waste.

9.1.1 Other Reports

Most Volatile Products

This report identifies products with fluctuating demand patterns. It helps in forecasting, inventory planning, and understanding market dynamics.

Top Creditors

This report lists the suppliers or creditors with the highest outstanding balances. It's important for managing vendor relationships and cash flow.

Audit Trail

This report provides a chronological record of activities or transactions within the system. It ensures transparency, accountability, and compliance with regulations.

Cancelled Transactions

This report documents transactions that were canceled or voided. It helps identify reasons for cancellations and assess their impact on operations.

Suppliers for Items

This report lists the suppliers for each item in inventory. It aids in procurement decisions, supplier evaluation, and supply chain management.

Audit Trail Extended

An extended version of the audit trail report may include additional details or logs related to system activities for comprehensive tracking and analysis.

Deleted Sales Records

This report logs sales records that have been deleted from the system. It's useful for data integrity checks and investigating discrepancies.

Consumer Side Price History

This report tracks the price history of products from the perspective of consumers. It helps in analyzing pricing trends and consumer behavior.

Supplier Side Price History

Similar to the consumer side price history, this report tracks the price history of products from the perspective of suppliers.

Periodic Sales Totals

These reports provide summaries of sales activity over specific periods, with or without amounts.

Top Selling Products by value

This report ranks products based on their total sales value rather than quantity. It helps assess revenue generation and profit margins.

Least Selling Products by value

Similar to the least selling products by quantity, this report identifies products with the lowest sales value.

9.2 Qualitative Reports

Welcome to the Qualitative Reports section of the Business Manager manual. Here, you'll discover a wealth of information focusing on descriptive and non-numerical data. Gain insights into customer feedback, employee satisfaction, market trends, and qualitative assessments of products or services. These reports provide a deeper understanding of customer preferences, brand

perception, and areas for improvement beyond numerical metrics.

Sales Reports:	Stock Reports:	Other Reports:	
Top Selling Products by quantity	Goods Returns rate	Most Volatile Products	Quantitative
Least Selling Products by quantity	Goods Expiry rate	Top Creditors	Qualitative
Non Selling Items	Stock card	Audit Trail	Financial
Cancelled Transactions	Suppliers for Items	Audit Trail Extended	Administrative
Deleted Sales Records		Consumer Side Price History

Sundry Sales

This report covers miscellaneous or non-standard sales transactions that don't fit into typical categories.

Sales performance

Sales Performance is a report that summarizes sales activity within a chosen period, showing items sold, quantities, unit costs, amounts, receipt numbers, and the user who processed the transactions, helping businesses track product movement, cashier accountability, and revenue trends.

Sales Detail Inventory Status

Sales Detail Inventory Status is a report that links sales transactions to inventory records, showing opening balances, quantities received, adjusted, sold or issued, and the remaining balance, helping businesses track stock movement and ensure that inventory levels match sales activity.

9.2.2 Stock Reports:

Stock Status – General

This report gives a general overview of the current stock status, including quantities on hand, available, reserved, etc.

Stock Status – Stores

Similar to the general stock status report, but specific to individual stores or locations.

Stock Status - Sales Point

This report focuses on the stock status at sales points or retail locations, providing details on inventory levels, movements, etc.

Stock Taking Sheet Sales Point

This report is used during physical stock-taking processes at sales points to reconcile physical inventory with system records.

Stock Taking Report Sales Point

A report generated after stock-taking at sales points, providing details on discrepancies, adjustments, etc.

Stock Reorder (based on min levels)

This report identifies items that have fallen below minimum stock levels and need to be reordered to maintain adequate inventory.

Stock Reorder (based on max levels)

Conversely, this report identifies items that have exceeded maximum stock levels and may need to be reduced or redistributed.

9.2.3 Other Reports

Price Analysis

This report analyzes pricing trends, including changes over time, comparisons between products or categories, and the impact on sales or profitability.

Sales Performance

These reports evaluate sales performance metrics such as revenue, profit, margins, etc., either overall or by specific products or categories.

Sales Performance by Product Category

This report breaks down sales performance metrics by product categories, providing insights into the performance of different product lines.

Sales Details Inventory Status

This report offers detailed information on the inventory status of products sold, including quantities, locations, movements, etc.

Teller Performance

These reports assess the performance of sales personnel or tellers, typically based on metrics such as sales volume, customer satisfaction, etc.

Teller Performance Based On Time

This report analyzes teller performance based on time-related factors such as peak hours, day of the week, etc.

Stock Receipt Summary

This report summarizes stock receipts or incoming inventory, providing details on quantities received, suppliers, etc.

Stock Taking Exception Report Sales Point

This report highlights exceptions or discrepancies identified during stock-taking at sales points, helping to investigate and resolve issues.

9.3 Financial Reports

Step into the Financial Reports section to explore comprehensive insights into the financial health and performance of your business. From income statements to balance sheets and cash flow statements, these reports offer detailed statements and financial metrics. Track revenue, expenses, profits, assets, liabilities, and cash flow to make informed financial decisions and meet regulatory requirements.

9.3.1 Financial Reports

Outstanding Invoices

This report lists invoices that have not yet been paid by customers, providing insight into the accounts receivable balance and potential cash flow.

Statement of Account – General

This report provides a summary of financial transactions, including credits, debits, and balances, across all accounts.

Statement of Account - Invoice Specific

This report offers a detailed breakdown of financial transactions associated with specific invoices, providing clarity on payment status and transaction history.

Bank Transactions

This report summarizes all financial transactions related to bank accounts, including deposits, withdrawals, transfers, and bank fees.

Income Statement (Profit and Loss Statement)

This report summarizes the revenue, expenses, and resulting net income or loss over a specific period, providing insights into the company's profitability.

Trial Balance

This report lists the balances of all ledger accounts to ensure that debits equal credits, helping to identify any discrepancies in the accounting records.

Balance Sheet

This report provides a snapshot of the company's financial position at a specific point in time, including assets, liabilities, and equity.

Leaders

It seems like this might be a placeholder or a heading for another section. It's unclear what specific financial report or information this refers to.

Imprest

This might refer to an imprest system, which is a method of maintaining a fixed amount of money to cover minor expenses or emergencies. However, it's unclear how it relates to a financial report.

9.3.2 Financial Status:

Income Statement

This provides a summary of the company's financial performance over a specific period, showing revenues, expenses, and net income or loss.

Balance Sheet

This provides a snapshot of the company's financial position, showing assets, liabilities, and equity at a specific point in time.

9.4 Administrative Reports

Discover the Administrative Reports section, where you'll find a range of operational data and administrative tasks within Business Manager. From user activity logs to system configurations and security audits, these reports help you manage system settings, track user interactions, monitor system performance, and ensure compliance with organizational policies and regulations.

9.4.1 Attendance Reports:

Attendance Summaries

This report provides a summarized overview of attendance data for a specific period, including total attendance, average attendance, attendance trends, etc.

Attendance Details

This report offers a detailed breakdown of individual attendance records, including dates, times, attendance status (e.g., present, absent, late), reasons for absence or tardiness, etc.

9.4.2 General Data Entry Reports:

Check Store Receipts

This report involves verifying or reconciling store receipts to ensure accuracy and completeness in financial records.

Stock Receipt Data Entry Status

This report provides information on the status of data entry related to stock receipts, including completeness, accuracy, and any pending entries.

9.4.3 Business Value Reports

Gross Sales Profit

This report calculates the gross profit generated from sales by subtracting the cost of goods sold (COGS) from total sales revenue.

Daily Transaction Summaries

This report summarizes daily business transactions, including sales, purchases, expenses, etc., for a clear overview of daily financial activities.

Monthly Sales Totals

This report aggregates sales data over a monthly period to provide insights into sales performance trends, seasonality, etc.

Stock Value

This report calculates the total value of stock inventory on hand, providing insights into the financial health and asset value of the business.

Periodic Cash Flow

This report tracks the inflow and outflow of cash over specific periods, helping to monitor liquidity, manage expenses, and plan for financial obligations.

Negative Stock

This report identifies instances where the inventory level for certain items has fallen below zero, indicating potential stockouts or inventory management issues.

Negative Profit

This report calculates instances where the profit generated from sales is negative, indicating that the cost of goods sold exceeds sales revenue.

Selling Price < Cost Price

This report identifies products where the selling price is less than the cost price, potentially affecting profitability and pricing strategies.

POINT OF SALE

At the customer fore front

10.0 Point of Sale Access

Once accounts have been created and roles assigned in the Back Office section of Business Manager, cashiers can seamlessly access the Point-of-Sale interface. By logging in with their unique account credentials, including username and password, authorized cashiers can gain access to the Point-of-Sale view. This interface enables them to efficiently process transactions, manage inventory, and provide exceptional service to customers. With secure login credentials, each cashier can access the Point-of-Sale system tailored to their assigned role, ensuring smooth operations and accurate record-keeping.

Version: 20230921

The Point of Sale (POS) view in Business Manager provides a user-friendly interface designed to streamline transactions and enhance efficiency. Here's a breakdown of its key components:

10.1 Header with Action Buttons:

Focus

Allows users to bring the POS view to the forefront for easy access.

Save

Enables saving the current transaction for record-keeping: Upon clicking the 'Save' button in the Point-of-Sale interface, the current transaction details are

securely stored within the system for comprehensive record-keeping purposes. This feature ensures that all sales activities are accurately documented and easily retrievable for future reference.

Once the save button is clicked, the receipt printing function is triggered: As part of the streamlined sales process, clicking the 'Save' button automatically triggers the receipt printing function. This action generates a detailed receipt containing the transaction summary, including items purchased, quantities, prices, applicable discounts, and the total amount due. The printed receipt serves as confirmation of the sale and provides customers with a tangible record of their purchase.

Sundry - The Search Center

When you click the 'Sundry' button in the Point-of-Sale interface, it opens up the Search Centre, a comprehensive tool designed to streamline inventory item selection. The Search Centre displays a complete list of available inventory items, allowing you to easily search and choose the products you need for the current transaction.

Key Features

1. **Inventory Item Display:** The Search centre presents all inventory items in a user-friendly interface, organized for quick navigation and selection.
2. **Search Functionality:** A convenient search bar is provided, enabling you to quickly locate specific items by name, category, or other relevant keywords.
3. **Barcode Scanner Alternative:** In the event of a barcode scanner failure or for items without barcodes, the search bar offers a reliable alternative for item identification.
4. **Seamless Integration:** The Search Centre seamlessly integrates with the Point-of-Sale system, ensuring a smooth and efficient transaction process.

With the Search Centre's intuitive interface and powerful search capabilities, Business Manager empowers users to efficiently manage inventory and complete sales transactions with ease, even in challenging circumstances.

Client - Connecting with Customers

Clicking on the 'Client' button within the Point-of-Sale interface opens up a gateway to customer management. This feature allows users to access a comprehensive list of all registered customers, providing a convenient area for selecting and associating a customer with the current transaction.

Key Features:

1. **Customer List Display:** The 'Client' feature presents a complete roster of all registered customers, facilitating easy access to customer information during transactions.
2. **Search and Select:** An intuitive search function is available, enabling users to quickly locate specific customers by name, contact details, or other relevant criteria.
3. **Customization Options:** Users can effortlessly select a customer from the list to associate them with the current transaction, ensuring personalized service and accurate record-keeping.
4. **Enhanced Receipts:** Upon selection, the chosen customer's name is automatically included on the receipt, providing a personalized touch to the transaction and enhancing customer satisfaction.

By leveraging the 'Client' feature, Business Manager empowers users to build stronger customer relationships, streamline transactions, and deliver exceptional service with every interaction.

Close – calling it quits for the day

Closes the current transaction window and app.

Tender

Initiates the payment process for the transaction. When you press tender, a pop will come asking whether a customer is paying using alternative means like bank deposit, card. If they are not click no, this will make the paid input field active and be able to put in an amount, where you put in the amount and continue to save.

Hold

Temporarily suspends the transaction for later retrieval.

How it Works

1. Activation: Simply press the 'Hold' button to initiate the transaction suspension process.
2. Input Details: Upon clicking 'Hold,' a prompt window appears, prompting users to input relevant details that serve as a reminder for retrieving the transaction later. Users can input notes or reminders that help them identify and manage held transactions effectively.

3. Confirmation Prompt: After inputting the transaction details, users are prompted with a confirmation window before saving the transaction. This prompt ensures that users confirm their intention to hold the transaction, preventing accidental actions.

4. Transaction Suspension: Once confirmed, the transaction is temporarily suspended and stored within the system for later retrieval. This enables users to continue with other tasks or transactions without losing important transaction details.
5. Retrieval Process: To retrieve a held transaction, users can repeat the same process this time round clicking the retrieve button at the bottom of the pop.

- After clicking the retrieve toggle, press okay and a user will be taken to a screen where they can look for the held transaction and retrieve it.

Date	Amount	Comments
